

LAMIS SAIDI

Test & Validation | Test Automation | Embedded Software Engineer

✉ ls.lamissaidi@gmail.com ☎ +216 28 858 523 📍 Ariana, Tunisia 🔗 linkedin.com/in/lamis-saidi

PROFESSIONAL SUMMARY

Polyvalent Computer Engineer with hands-on experience in Test & Validation, Test Automation, and Embedded Software across the automotive and aerospace industries. Skilled in coordinating cross-functional teams, training new team members, and delivering high-quality validation for safety-critical systems.

TECHNICAL SKILLS

Programming Languages — C · C++ · Python · Java · VHDL
Testing Types — Functional · Non-Functional · Regression · Non-Regression · Performance · Stress · User Acceptance Testing
Testing Techniques — Black-Box · White-Box · Exploratory Testing
Test Automation & Engineering Tools — Robot Framework · Vector CANalyzer · CAPL · Python Drivers · Qt Creator · STM32CubeIDE · Visual Studio · Quartus (FPGA · VHDL) · LabVIEW · Arduino IDE
Anomaly & Requirements Tracking — Jira (SQL Dashboards), CodeBeamer, Silk Central, User Stories & Test Case Design
Embedded & Electronic Platforms — STM32 · Raspberry Pi · ESP32 · Arduino · NI Boards · Digilent Digital Discovery
Communication Protocols — CAN · I²C · UART · SPI · MQTT · RS-232 · RS-485 · TCP/IP
Databases — SQL, SQLite, Firebase
Methodologies — Agile · Hardware-in-the-Loop (HIL)

CORE COMPETENCIES

Project Planning · Problem Solving · Time Management · Teamwork · Anomaly Detection & Root-Cause Analysis · Client Communication · Team Coordination & Training · Cross-Functional Collaboration

PROFESSIONAL EXPERIENCE

Test & Validation Engineer — Test Automation, SERMA INTERNATIONAL 06/2026 – Present | Tunisia
Aerospace Department

- Analyze system requirements and review test scenarios to ensure comprehensive requirements and test coverage.
 - Design, write, and execute functional test cases and test scenarios using Python and Robot Framework.
 - Develop automated tests to improve test execution efficiency and contribute to reducing post-release defects.
 - Apply black-box and white-box testing techniques to validate system behavior.
 - Analyze test results, investigate failures, and identify anomalies for correction.
 - Develop Python drivers for communication protocols and API-based test interfaces.
 - Execute functional and User Acceptance Testing (UAT) activities.
 - Collaborate with development and validation teams to support defect resolution.
- Technologies:** Python · Robot Framework · UART · RS-232/RS-485 · CAN · SPI · Digilent Discovery · WaveForms SDK/API

Embedded Software Engineer, SERMA INTERNATIONAL 03/2026 – 06/2026 | Tunisia

- Develop Python drivers to control and automate laboratory equipment used in the automated test bench.
 - Create a graphical application for equipment control using Qt Creator and C++.
 - Integrated 15+ ATP (Acceptance Test Procedure) tests into the application and validated their execution and performance.
 - Conduct different levels of testing: integration testing, system testing, and acceptance testing.
 - Development of a Python script to automatically generate ATR (Acceptance Test Results).
- Technologies:** C++ · Python · Qt Creator · NI-9474 · Visual Studio · Power Supply · Multimeter · Calibrator · Relay Switch

Automotive Audio Test & Validation Engineer, SERMA INTERNATIONAL 02/2024 – 03/2026 | Tunisia
Client: Renault Alliance

- Configured and tested Hardware-in-the-Loop (HIL) A-IVI automotive systems using Vector CANalyzer and CAPL.
 - Executed functional, non-functional, regression, non-regression, performance and stress testing.
 - Validated infotainment functionalities including Apple CarPlay, Android Auto and ADAS system.
 - Applied black-box and exploratory testing techniques to identify and isolate defects.
 - Designed and executed test cases and test scenarios using CodeBeamer and Silk Central.
 - Analyzed audio quality and system behavior using R&S® UPP.
 - Tracked and triaged anomalies using Jira, including SQL-based dashboards and ticket monitoring.
 - Created and maintained 10–15 bug tickets, test tickets, and user stories each month across development and QA cycles.
 - Participated in client meetings to review requirements, anomalies, and software-release stability.
 - Coordinated test activities within the audio validation team, distributed testing tasks, and supported new team members.
 - Conducted audio analysis at the end of each sprint and reported audio-quality status for software releases and new features.
- Technologies:** Vector CANalyzer · CAPL · Jira · SQL · CodeBeamer · Silk Central · R&S® UPP · CAN · HIL · Agile · Automotive ECU

EDUCATION

Engineering Degree in Computer Science — Embedded Systems 2021 – 2024 | Ariana, Tunisia
ESPRIT — Private Higher School of Engineering and Technology

Preparatory Cycle for Engineering Studies — Technology 2018 – 2021 | El Manar, Tunisia
IPEIEM — Preparatory Institute for Engineering Studies El Manar

CERTIFICATIONS

Applications of AI for Anomaly Detection — 11/2023 | NVIDIA
Applications of AI for Predictive maintenance — 11/2023 | NVIDIA
ISTQB® Foundation Level – Version 4.0 certification — 05/2026 | ISTQB
